

Sophie Lingle

Project Proposal

1. The name of your website: Novel Haven
2. The description of your topic: My website will be advertising a bookstore. Some of the features showcased will include the most popular book choices, top selections from certain genres, the store's physical location, and an online ordering page. People will be able to learn about the store's contact information and history, while also being able to shop and browse through popular books offered. The store will also host events such as sales and author meet and greets, showcased on the events tab.
3. A list of each of the page names (Note: About Us would be a page, but login would not (That's more like a popup feature)).
 - Home
 - About Us
 - Best Sellers
 - Top Genres
 - Order Online
 - Events
 - Contact Us
4. A description of the data you will be storing, manipulating, and viewing. Go Into details, e.g. We will be storing a list of tools (Tool name, description, price, producer, ...). Only the administrator will be able to add/edit/delete, so we will need user accounts with login security.

The data that I will be storing and manipulating are books. More specifically, the title, description, author, genre, publication date, and price of the books listed. This way, the customers can view all of the relevant information surrounding the desired book easily.
